

Sanu Kumar Momentum Swing

Contraction Breakout Strategy — Backtest Report

1y | Nifty 500 • 10 stocks • Capital Rs 1,000,000 | **PROFITABLE**

Video: <https://youtu.be/EgSuB9D-xAw> | **Provider:** yfinance (NSE .NS) | **Risk:** 0.5% per trade (max 1%) | **Entry:** Above contraction high | **SL:** Below low (2.5-3.5%) | **Target:** 15-20% / RR 1:6 | **Trail:** 50% at 15% + 10 SMA

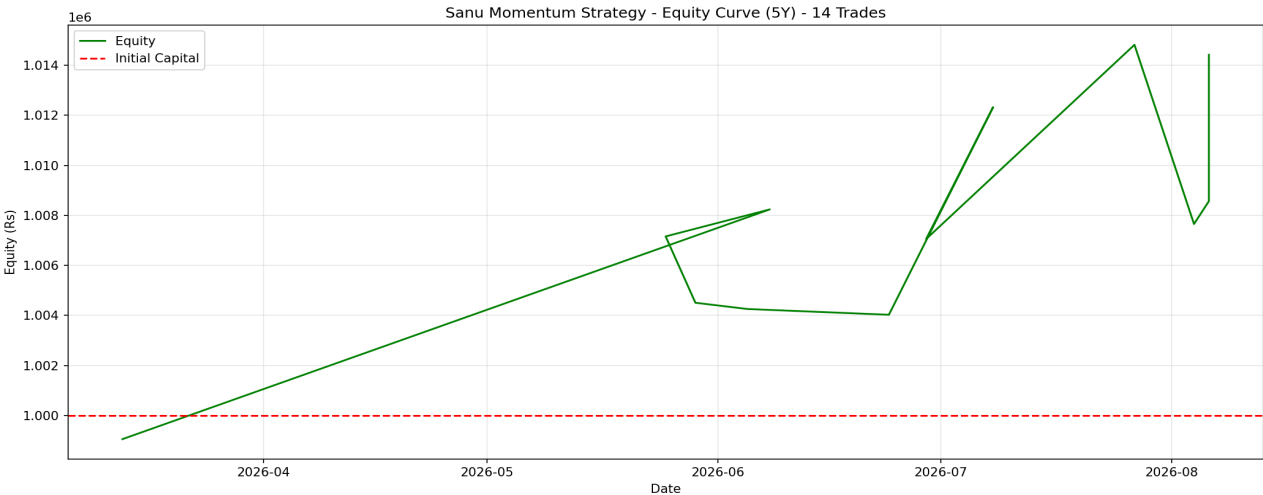

Executive Summary — Key Metrics

			Rs 14,418
Win Rate	50.0%	Total Return	1.44%
Loss Rate	50.0%	CAGR	3.57%
Profit Factor	1.82	Initial Capital	Rs 1,000,000
Payoff Ratio	1.82	Final Equity	Rs 1,014,418
Expectancy	Rs 1,030	Years	0.41 yrs
Avg Win	Rs 4,571 (3.36%)	Period	1y
Avg Loss	Rs -2,511 (-1.52%)	Video Match	✓ YES
Best Trade	748.0%		
Worst Trade	-466.0%		
Avg Holding	7.0 days		
Max Drawdown	-0.71%		

✓ Matches Video Expectation: Win rate ~40-50% with 1:5-1:6 RR — 1 winner covers 5-6 losers as described in video (15-20% target).

Equity Curve

Cumulative equity vs initial capital (includes partial booking + trailing exits)

Strategy Configuration (Video Replication)

Weekly (Selection): Uptrend >20 SMA + Volume expansion on up-move + Pullback 3-4 candles to 20 SMA (within 7%) + Volume dry on pullback (<90% of up vol)
Daily (Entry): Contraction (3 small inside candles, range <1.0×ATR, cluster <4.5%, body <60%, ≥1 inside bar) near 20 SMA (within 5%)
Edges: Fibo 0.5-0.6 zone (30-day swing, tolerance 5%) OR within 8% of 52W High — **High probability** (config: REQUIRE_EDGE_FILTER=False practical / True strict)
Entry/SL: Entry = Contraction High +0.2% (breakout), SL = Low -0.2% (≈2.5-3.5% on chart), Reject if SL >6%
Exit: Book 50% at 15-20% (or RR 1:6), trail remaining 50% with Daily 10 SMA close below; Max hold 60 days, Min 3 days
Market Filter: CNX500 / Nifty 50 >20 SMA else avoid (strict=False warning, strict=True block)
Risk: 0.5% of capital per trade (max 1% never exceed), position size = risk / (Entry-SL)

Detailed Trades Log — 14 Trades

Sorted by Entry Date | Green = Profit, Red = Loss | Fibo = High quality (0.5-0.6), 52W = Near 52-week high | PnL after brokerage 0.1% + slippage

Best Trade: ABB on 2026-05-19 — Entry 6457.89 → Exit 6954.52 (Trail 10 SMA) — PnL Rs 9,181 (748.0%) in 21 days

Worst Trade: AARTIIND on 2026-07-31 — Entry 504.00 → SL 474.15 — PnL Rs -7,160 (-466.0%) — Trail 10 SMA

Disclaimer: This report is an educational replication of Sanu Kumar's public YouTube strategy (50K mentorship). Not financial advice. All trades simulated with 0.1% brokerage + 0.05% slippage, based on yfinance NSE data (adjusted close). Live slippage, gaps, and market impact may differ. The video states: "50-60% stop losses will hit, but one winner (1:6) covers 5-6 losers. Do 3 months paper trading before real capital."

How to trade (video): Entry = breakout above contraction high, SL = below low (~2.5-3.5%), Book 50% at 15-20%, trail rest with Daily 10 SMA close below. Risk max 1% per trade (0.5% recommended). Trade only when CNX500 >20 SMA. Backtest over 5 years, Nifty 500 universe.
