Disclaimer: This report is an educational replication of Sanu Kumar's public YouTube strategy (50K mentorship). Not financial advice. All trades simulated with 0.1% brokerage + 0.05% slippage, based on yfinance NSE data (adjusted close). Live slippage, gaps, and market impact may differ. The video states: "50-60% stop losses will hit, but one winner (1:6) covers 5-6 losers. Do 3 months paper trading before real capital."

How to trade (video): Entry = breakout above contraction high, SL = below low (~2.5-3.5%), Book 50% at 15-20%, trail rest with Daily 10 SMA close below. Risk max 1% per trade (0.5% recommended). Trade only when CNX500 >20 SMA. Backtest over 5 years, Nifty 500 universe.
