Contraction Breakout Strategy — Backtest Report

2y | Nifty 500 • 1 stocks • Capital Rs 1,000,000 | **PROFITABLE**

Video: <https://youtu.be/EgSuB9D-xAw> | **Provider:** yfinance (NSE .NS) | **Risk:** 0.5% per trade (max 1%) | **Entry:** Above contraction high | **SL:** Below low (2.5-3.5%) | **Target:** 15-20% / RR 1:6 | **Trail:** 50% at 15% + 10 SMA

Executive Summary — Key Metrics

			Rs 2,496
Win Rate	40.0%	Total Return	0.25%
Loss Rate	60.0%	CAGR	0.36%
Profit Factor	1.19	Initial Capital	Rs 1,000,000
Payoff Ratio	1.78	Final Equity	Rs 1,002,496
Expectancy	Rs 499	Years	0.7 yrs
Avg Win	Rs 7,919 (3.01%)	Period	2y
Avg Loss	Rs -4,447 (-1.95%)	Video Match	✗ Check
Best Trade	498.0%		
Worst Trade	-298.0%		
Avg Holding	10.4 days		
Max Drawdown	-1.0%		

■ **Tunings:** Current win rate / profit factor below video's ideal 40-50% >1.2. Try: REQUIRE_EDGE_FILTER=True, relax CONTRACTION thresholds, or extend holding. Backtest over longer period.

Equity Curve

Cumulative equity vs initial capital (includes partial booking + trailing exits)

Strategy Configuration (Video Replication)

Weekly (Selection): Uptrend >20 SMA + Volume expansion on up-move + Pullback 3-4 candles to 20 SMA (within 7%) + Volume dry on pullback (<90% of up vol)
Daily (Entry): Contraction (3 small inside candles, range <1.0×ATR, cluster <4.5%, body <60%, ≥1 inside bar) near 20 SMA (within 5%)
Edges: Fibo 0.5-0.6 zone (30-day swing, tolerance 5%) OR within 8% of 52W High — **High probability** (config: REQUIRE_EDGE_FILTER=False practical / True strict)
Entry/SL: Entry = Contraction High +0.2% (breakout), SL = Low -0.2% (≈2.5-3.5% on chart), Reject if SL >6%
Exit: Book 50% at 15-20% (or RR 1:6), trail remaining 50% with Daily 10 SMA close below; Max hold 60 days, Min 3 days
Market Filter: CNX500 / Nifty 50 >20 SMA else avoid (strict=False warning, strict=True block)
Risk: 0.5% of capital per trade (max 1% never exceed), position size = risk / (Entry-SL)

Detailed Trades Log — 5 Trades

Per-Symbol Summary

Symbol	Trades	Wins	Win Rate	Total PnL (Rs)	Avg PnL (Rs)
RELIANCE	5	2	40%	2,496	499

Best Trade: RELIANCE on 2025-04-25 — Entry 1308.61 → Exit 1376.51 (Trail 10 SMA) — PnL Rs 12,586 (498.0%) in 17 days
Worst Trade: RELIANCE on 2025-12-31 — Entry 1564.12 → SL 1534.72 — PnL Rs -5,688 (-57.0%) — SL Hit

Disclaimer: This report is an educational replication of Sanu Kumar's public YouTube strategy (50K mentorship). Not financial advice. All trades simulated with 0.1% brokerage + 0.05% slippage, based on yfinance NSE data (adjusted close). Live slippage, gaps, and market impact may differ. The video states: "50-60% stop losses will hit, but one winner (1:6) covers 5-6 losers. Do 3 months paper trading before real capital."
How to trade (video): Entry = breakout above contraction high, SL = below low (~2.5-3.5%), Book 50% at 15-20%, trail rest with Daily 10 SMA close below. Risk max 1% per trade (0.5% recommended). Trade only when CNX500 >20 SMA. Backtest over 5 years, Nifty 500 universe.
